

Evidence is a **state**. Make it legible.

A read-only command surface for the ZYRQUEN v1.2 LTS audit package — showing what the bundle claims, what the internal checks confirm, and where independent verification is still required.

01 / SIGNATURE VERIFICATION

Verify an exported evidence file

Upload a .signed.json file created by this console. Verification runs locally in the browser; no file is sent to a server.

Check integrity in one step

We will reconstruct the signed payload, recalculate SHA-256, import the embedded ECDSA P-256 public key, and verify the signature.

VERIFICATION RESULT

Waiting for a file

Select a signed JSON export to begin local verification.

DIGITAL SIGNATURE READY
